SUMMARY

Software Development Engineer — Backend-focused with 4+ years of experience in Node.js and 1.5+ years of experience with React, building scalable multi-tenant SaaS, Web3 and real-time products. Strong expertise in NestJS, Express.js, TypeScript, PostgreSQL, MongoDB and event-driven microservices, with hands-on experience designing and owning backend systems end to end. Experienced in real-time blockchain indexing, idempotent processing, distributed systems, payment integrations, and real-time chat and notification systems, with additional experience building and integrating React-based frontend features.

SKILLS

Backend: Node.js, NestJS, Express.js, TypeScript, REST APIs, Microservices, RabbitMQ, Socket.IO, BullMQ
Databases: PostgreSQL (TypeORM), MongoDB (Mongoose, geospatial queries), Redis
Frontend: React, TypeScript, TanStack Query, Zustand, Tailwind CSS
Cloud Services: AWS (S3, SES), Google Cloud Storage
Auth & Security: JWT, OAuth 2.0, TOTP 2FA, RBAC, webhook signature verification
Payments & Integrations: Stripe, Razorpay, MoonPay, Transak, Twilio, SendGrid, Firebase Cloud Messaging, HubSpot, Zendesk
Web3: Solana (web3.js, Geyser gRPC, Helius), Ethers.js, Thirdweb, IPFS

EXPERIENCE

Software Development Engineer II (SDE-2) July 2024 – Present
SoluLab Pvt Ltd

- Own backend delivery for client products in Web3, fintech and AI SaaS, from requirements and API design through release.
- Sole backend developer on a Solana prediction market: built the real-time blockchain indexer, the order-matching engine integration and background workers that run safely across multiple servers, backed by 160+ Jest test files.
- Led the backend of a Web3 music platform as primary developer (~65% of the code), shipping 360+ APIs across 40+ NestJS modules, including token sales, staking and an NFT marketplace.
- Designed the microservice architecture for a multi-tenant AI contact center platform, led code reviews for the team, and built new feature modules in its React + TypeScript admin portals.
- Set module structure and API standards for frontend and mobile developers, and work directly with clients and smart contract teams on requirements and integrations.

Backend Developer | BitsShadow LLP January 2023 – June 2024

- Built RabbitMQ-based microservices for a photographer and videographer marketplace app (~220 APIs), including real-time chat, location-based search and subscriptions with Stripe and Razorpay.
- Developed the backend for mydryfruit.com, an e-commerce platform for buying dry fruits, covering the product catalogue, cart, orders and online payments.
- Implemented secure sign-up (OTP, Google and Apple Sign-In), Firebase push notifications and direct media uploads to AWS S3 for mobile users.
- Worked with the mobile team on API design and integration to deliver features from backend to app release.

PROJECTS

KindPredict – Solana Prediction Market Platform

Backend Developer | SoluLab

Node.js, NestJS, TypeScript, PostgreSQL, TypeORM, Solana (web3.js, Yellowstone Geyser gRPC, Helius), Socket.IO, Privy, AWS (S3, SES), Jest

- Backend for a Solana prediction market where users trade outcome shares and claim winnings. As the sole backend developer, owned 14 NestJS modules, 46 database tables and 80+ migrations serving 5 user roles, working with smart contract and matching-engine teams on integration contracts.
- Built a fault-tolerant Solana indexer with real-time streaming, gap backfill and Helius failover, reducing missed on-chain events by ~95%.
- Enabled multi-server worker scaling with PostgreSQL advisory-lock leader election, eliminating duplicate background processing and improving throughput by ~2x.
- Integrated the order-matching engine with signed orders, receipt verification, gap detection, per-order locks and Idempotency-Key deduplication.
- Automated market-maker onboarding from KYB through sandbox certification, reducing onboarding time by ~60%.
- Built role-based authentication with TOTP 2FA, Privy wallet login, custom permissions, forced logout and audit logs.
- Automated market resolution and payouts using Solana oracle and settlement data, reducing manual intervention by ~80%.

Guild – Web3 Music Platform for Artists

Senior Backend Developer | SoluLab

Node.js, NestJS, TypeScript, MongoDB, Google Cloud Storage, Thirdweb, Ethers.js, IPFS (Pinata), FFmpeg

- A multi-tenant SaaS where music artists manage releases, grow their audience and earn through NFT drops, token sales, staking and fan rewards.
- Owned ~65% of the backend, delivering 40+ modules and 360+ REST APIs supporting 10000+ artists/users.
- Implemented multi-tenant access controls for feature flags, subscriptions, organization blocking and storage quotas.
- Built Web3 modules covering ICO, staking, vesting, airdrops and NFT marketplace integrations with Thirdweb and Ethers.js.
- Automated real-time blockchain event processing, reducing missed events by ~90% through webhook verification and automatic registration.
- Built fan-engagement features including token rewards, quests, contests, social publishing and artist analytics.
- Designed a media pipeline for audio/image validation, transcoding and resizing using FFmpeg, Sharp and music-metadata.

ConX AI – Multi-Tenant AI Contact Center Platform

Full Stack Developer (Backend-focused)

NestJS, TypeScript, PostgreSQL, Redis, BullMQ, Socket.IO, AWS SES, React, TanStack Query, Zustand, Tailwind CSS

- A multi-tenant SaaS that lets businesses run AI-driven customer conversations and campaigns across Email, SMS and WhatsApp.
- Architected 3 microservices covering Platform, Billing & Analytics and Notification, enabling independent scaling and clear service boundaries.
- Built tenant onboarding, RBAC, OAuth integrations and BullMQ-powered bulk campaigns across Email, SMS and WhatsApp.
- Reduced dashboard load time by ~70%, from 3-4 seconds to <1 second, using precomputed analytics and Redis caching.
- Implemented LLM, STT and TTS usage metering with tenant-level quotas, alerts and analytics.
- Built centralized notifications and audit logging using Socket.IO, FCM, SendGrid and AWS SES.
- Delivered React + TypeScript admin modules using TanStack Query, Zustand and Tailwind CSS.

Camroo Pro – Social & Marketplace App for Photographers and Videographers

Backend Developer

Node.js, TypeScript, Express.js, MongoDB (Mongoose), RabbitMQ, Socket.IO, Stripe, Razorpay, AWS (S3, SES), Firebase Cloud Messaging, Puppeteer

- Backend for a mobile app where creators showcase portfolios, find freelance work, rent or sell gear, chat in real time and take paid courses.
- Built 20+ RabbitMQ-based microservices powering ~220 REST APIs and 30 MongoDB collections, serving 10,000+ users.
- Engineered real-time chat with Socket.IO, supporting typing indicators, delivery/read receipts and cross-device synchronization.
- Optimized location-based discovery using MongoDB geospatial queries, reducing search latency to ~150ms.
- Integrated Razorpay subscriptions with webhooks, plan-based quotas and automated expiry workflows.
- Delivered App Store-ready authentication and safety features including OTP, Google/Apple Sign-In, account linking and privacy controls.
- Automated gear rentals, referrals, course progress and PDF certificate generation, reducing manual operations by ~70%.

EDUCATION

Bachelor of Engineering

08/2017 - 06/2021

GUJARAT TECH. UNIVERSITY, Surat, Gujrat
